

multimac

The four-seater child seat

FITTING GUIDE

Initially, 2 **tether straps** are fitted to your car, and once this has been done the **Multimac** can be put in, or taken out, in about a minute.

We have a range of **tether straps** to suit all cars. The fitting will be one of the following types:

PLEASE NOTE: ISOFIX POINTS MUST NOT BE USED – THEY ARE NOT STRONG ENOUGH [Isofix strength = 400kgf: Adult Buckle Mounts = 2,000+kgf: MULTIMAC needs 1,350kgf]

STANDARD FITTING:

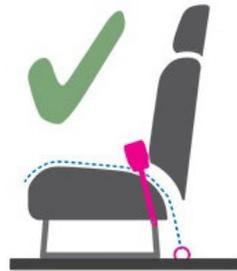

The supplied eye-bolts replace existing bolts securing the adult seat belt buckles into the car floor. The standard **tether straps** fit into the eye-bolts.

SPECIAL FITTING BY AGENT:

This is typically required in 20% of cars like MPVs and SUVs, where the seats can move, or be removed completely and the existing buckles attach to the seat frames directly – meaning there are no ready-made mountings on the floor.

Our fitting agents can provide appropriate certified mountings for the **tether straps**, which will not affect your car warranty. Normally this takes about an hour.

REPLACEMENT ADULT BUCKLES:

If the existing seat belt buckles protrude rigidly through the car seat, and would be crushed by the **Multimac**, these must be replaced by our certified 'buckles on webbing' which can fold out of the way.

SPACER:

On some cars the seat back is recessed within the wheel arches, limiting the width of **Multimac** which can be fitted.

Fitting a spacer of 50-100mm thickness can push the Multimac forward, still behind the front edge of the car seat, allowing a wider model **Multimac** to be used.
